

Security Assessment Report

Date of Assessment: 2024-09-09 14:26:58

Vulnerabilities Found

Possible SQL Injection vulnerability at <https://discord.com/blog>

Payload: '='

Reason: This payload tries to trick the query into accepting the input as a valid condition.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: 'LIKE'

Reason: Tests if the SQL query is vulnerable to a LIKE clause, often used in wildcards.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: =0--+

Reason: Attempts to bypass by terminating the query and adding a comment.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: OR 1=1

Reason: Classic SQL injection that always returns true, bypassing any logical checks.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: %00

Reason: Null byte injection, used to terminate strings prematurely in some databases.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: /*...*/

Reason: This payload uses SQL comments to bypass restrictions or manipulate logic.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: +

Reason: Tests for SQL concatenation vulnerabilities, often used in UNION or SELECT queries.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: ||

Reason: Checks if the database supports string concatenation via the double-pipe operator.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.

- Use parameterized queries to prevent injection attacks.

Payload: %

Reason: Tests for wildcard characters that might bypass query logic.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: @variable

Reason: Attempts to exploit SQL variables to manipulate the query.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: @@variable

Reason: Tests for vulnerabilities related to server-level variables.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: AND 1

Reason: Attempts to inject a true condition, testing for basic logical vulnerabilities.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: AND 0

Reason: Tests if false logical conditions are handled properly.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: AND true

Reason: Tries to inject a true boolean condition to manipulate the query.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: AND false

Reason: Attempts to break the logic by injecting a false condition.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: 1-false

Reason: Tests for vulnerabilities by manipulating boolean values in the query.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: 1-true

Reason: Tests if the query allows manipulation of boolean values.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: 1*56

Reason: Attempts to manipulate mathematical operations in the query.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: -2

Reason: Injects a negative number to test for vulnerabilities in numeric fields.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: 1' GROUP BY 1,2,--+

Reason: Groups results by multiple columns to manipulate query logic.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: ' GROUP BY columnnames having 1=1 --

Reason: Attempts to exploit HAVING clauses for injection.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: ,(select * from (select(sleep(10))))a)

Reason: Tests for time-based SQL injection (delaying response).

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: %2c(select%20*%20from%20(select(sleep(10))))a)

Reason: URL-encoded version of the sleep-based time delay injection.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: OR 1=1

Reason: Classic boolean-based injection, making the query always true.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: OR 1=0

Reason: Tests the opposite scenario, making the query always false.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: OR x=x

Reason: Checks for identical comparisons to always return true.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: OR x=y

Reason: Checks if non-identical comparisons will throw errors or vulnerabilities.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: OR 1=1#

Reason: Comment-based bypass, ensuring the injected part is always true.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: OR 1=0#

Reason: Similar to the previous but tests for false logic.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: OR x=x#

Reason: Tests comment-based injections with boolean true logic.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: OR x=y#

Reason: Tests false boolean logic in comment-based injection.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: OR 1=1--

Reason: Tests injection by terminating the query and adding a comment.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: OR 1=0--

Reason: Tests for false condition injection with query termination.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: OR x=x--

Reason: Checks if identical conditions in the injection work as expected.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: OR x=y--

Reason: Tests non-identical conditions in comment-based injections.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: OR 3409=3409 AND ('pytW' LIKE 'pytW'

Reason: Checks for a true condition using the LIKE operator.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: OR 3409=3409 AND ('pytW' LIKE 'pytY')

Reason: Checks for a false condition using the LIKE operator.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: HAVING 1=1

Reason: Injects into HAVING clauses to bypass group filtering.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: HAVING 1=0

Reason: Injects into HAVING clauses with a false condition.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: HAVING 1=1#

Reason: Tests for comment-based injection within the HAVING clause.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: HAVING 1=0#

Reason: Tests false logic in comment-based HAVING injections.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: HAVING 1=1--

Reason: Injects true conditions in HAVING clauses and terminates the query.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: HAVING 1=0--

Reason: Injects false conditions in HAVING clauses and terminates the query.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: AND 1=1

Reason: Simple true condition to manipulate logic.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: AND 1=0

Reason: False condition to manipulate the logic flow.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: AND 1=1--

Reason: True condition injection with query termination.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: AND 1=0--

Reason: False condition injection with query termination.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: AND 1=1#

Reason: True condition injection with comment-based termination.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: AND 1=0#

Reason: False condition injection with comment-based termination.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: AND 1=1 AND '%='

Reason: True condition injection using wildcards.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: AND 1=0 AND '%='

Reason: False condition injection using wildcards.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: AND 1083=1083 AND (1427=1427

Reason: Tests for multiple true numeric conditions.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: AND 7506=9091 AND (5913=5913

Reason: Tests false and true conditions together.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: AND 1083=1083 AND ('1427=1427

Reason: Checks for vulnerabilities with string comparisons.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: AND 7506=9091 AND ('5913=5913

Reason: Tests for injection with a mix of false and true conditions.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.

- Use parameterized queries to prevent injection attacks.

Payload: AND 7300=7300 AND 'pKIZ'='pKIZ

Reason: Tests string comparisons for always true conditions.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: AND 7300=7300 AND 'pKIZ'='pKIY

Reason: Tests string comparisons for always false conditions.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: AS INJECTX WHERE 1=1 AND 1=1

Reason: Tests true conditions in WHERE clauses.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: AS INJECTX WHERE 1=1 AND 1=0

Reason: Tests false conditions in WHERE clauses.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: WHERE 1=1 AND 1=1--

Reason: Tests WHERE clause injection with termination.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: WHERE 1=1 AND 1=0--

Reason: Tests false logic in WHERE clauses.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: ORDER BY 1--

Reason: Orders by the first column, probing for SQL injection points.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: ORDER BY 2--

Reason: Orders by the second column.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: ORDER BY 31337#

Reason: Tests for large numbers in ORDER BY clauses.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: RLIKE (SELECT (CASE WHEN (4346=4346) THEN 0x61646d696e ELSE 0x28 END))

Reason: Tests RLIKE condition for true.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.

Payload: and (select substring(@@version,1,1))='X'

Reason: Probes for the SQL version to understand the database.

Remedies and Precautionary Measures:

- Validate and sanitize input parameters in SQL queries.
- Use parameterized queries to prevent injection attacks.
